

## Output results

Upon pressing the button "**Rezultati/Results**" the program checks the correctness, that is, the logicity of data entered and, possibly, points to illogicalities. If the data are correct, the program presents the results in the window appearance of which is given in the Image 6.

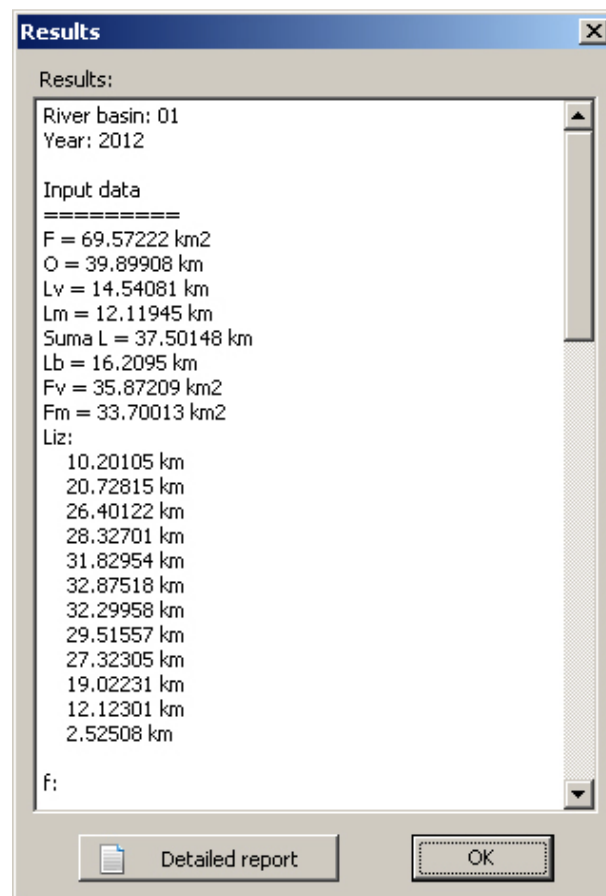

Image 6: Appearance of the program "Results"

Under this window, input and output results are presented in a numerical form, which are sufficient for experts specialised in the field of soil conservation to identify possible problems in the river basin. If a more detailed report, with descriptive overview of the results of the research with specific explanations and comments is sought the button "Detailed report" should be pressed. (Image 7).

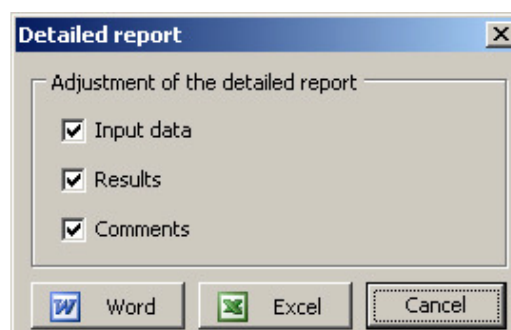

Image 7: Appearance of the dialogue for generating the detailed report

While generating the detailed report, "IntErO" offers the option of report generation in Microsoft Word or Excel format, depending on the needs. The reports are generated in the language previously set in the program (English or Serbian).
