REDESCRIPTION AND NEW MORPHOLOGICAL DATA ON
Charletonia bucephalia LARVA (ACARI: ERYTHRAEIDAE) FROM
SPECIMENS COLLECTED IN MONTENEGRO

SUMMARY

Redescription and new morphological data on larva of *Charletonia bucephalia* Beron, 1975 is given. New metric data for *Charletonia bucephalia*, ectoparasitic larva on *Euchorthippus declivus* (Brisout, 1848) (Orthoptera: Acrididae) from Paštrovska Gora, Montenegro, are provided.

Keywords: *Charletonia bucephalia*, *Euchorthippus declivus*, larva, redescription, morphological data.

INTRODUCTION

Charletonia bucephalia was described by Beron (1975) based on the larvae collected from Orthoptera: Tettigoniidae in Primorsko, Burgas, Bulgaria. During the period 2010-2012 a survey was carried out to collect and identify terrestrial Parasitengona mites associated with short-horned grasshoppers *Euchorthippus declivus* (Acrididae) in Paštrovska Gora, south Montenegro by senior author. After this study it was found that the specimens of species *Charletonia bucephalia* from Bulgaria and Montenegro conspecific. This species was known from Bulgaria, Croatia, Greece (Haitlinger, 1984, 2000, 2004, Beron, 1975, Southcott, 1991). Figures of this species given by Beron (1975) are incomplete and dimensions were based on not many specimens. Therefore, in this paper new figures and measurements are given for *Charletonia bucephalia* (Table 1).

MATERIAL AND METHODS

The larvae of mites were collected in Montenegro from Orthoptera, during the period 2010-2012. Samples of grasshoppers were taken twice in every week of July (2010-2012). The specimens were collected by a sweep net on grasses and preserved in 70% ethanol. They were examined in laboratory for mites associated with them. Mite specimens were detached under the wings and on the thorax of Orthoptera by an insect pin, cleared in Nessbitt's solution and mounted in Faure medium (Walter & Krantz, 2009). All measurements are given in micrometers (μm) and calculated using a Carl Zeiss Axioscope A1 microscope. The terminology and abbreviations follow Robaux (1974) and Saboori *et al.* (2009).

RESULTS AND DISCUSSION

Description (based on manuscript of *Charletonia bucephalia* Beron, 1975, Acta zool. bulgarica, with additional data from Montenegro specimens) - LARVA - Dorsal surface with 35- 36 (fD) barbed and pointed setae, arranged 2-6-6-6-4-4-2(Fig.2); Dorsal setae in enlarge platelates, about 5,5. One eye on each side of idiosoma and 21 µm in diameter. Dorsal scutum punctate, pentagonal, somewhat longer than wide, with three pairs of scutalae. AL, ML and PL barbed and pointed, PL slightly shorter than ML and AL. Two pairs of sensillae, ASens and PSens barbed in distal 1/3, AM<S (Fig. 3). Anterior margin of scutum slightly convex, posterior margin rounded, and near S bases is slightly concave. Two setae placed between scutum and eyes.

Idiosoma ventrally with 2 barbed setae 1a (between coxae I), and 2 barbed setae 2a (between coxae II) which are not distinctly longer than setae 1a. Between coxae II-III two slightly barbed setae 3a and 14-15 slightly barbed setae (fV) posterior to coxae III(Fig.1). Coxal fields punctate.

Gnathosoma with hypostomalae aHy, pHy and galaelae, both nude. Galeala not longer than posterior hypostomalae. Cheliceral bases and subcapitulum punctate. Palpal femur and genu each with one slightly barbed seta. Palptibia with three setae (two barbed, one nude). Palpal tibial claw bifurcate. Palptarsus with 7 setae, 1 very long seta and 6 distinctly shorter setae, (with eupathidium and solenidion). One seta barbed, others nude (Fig.11,12).

Leg segmentation formula: 7-7-7. Leg setal formula:

Leg I: Ta 1ω, 2ζ, 1Cp, 27N; Ti 1κ, 2φ, 18N; Ge 1κ, 1Φ, 12N; Tf 5N; Bf 4N; Tr 1N; Cx 1N (Fig. 5,8).

Leg II:Ta 1ω, 1ζ, 29N; Ti 2φ, 18N; Ge 1κ, 12N; Tf 5N; Bf 4N; Tr 1N; Cx 2N (Fig. 6,9).

Leg III:Ta 1ζ, 30N; Ti 1φ, 18N; Ge 12N; Tf 5N; Bf 2N; Tr 1N; Cx 2N (Fig. 7,10).

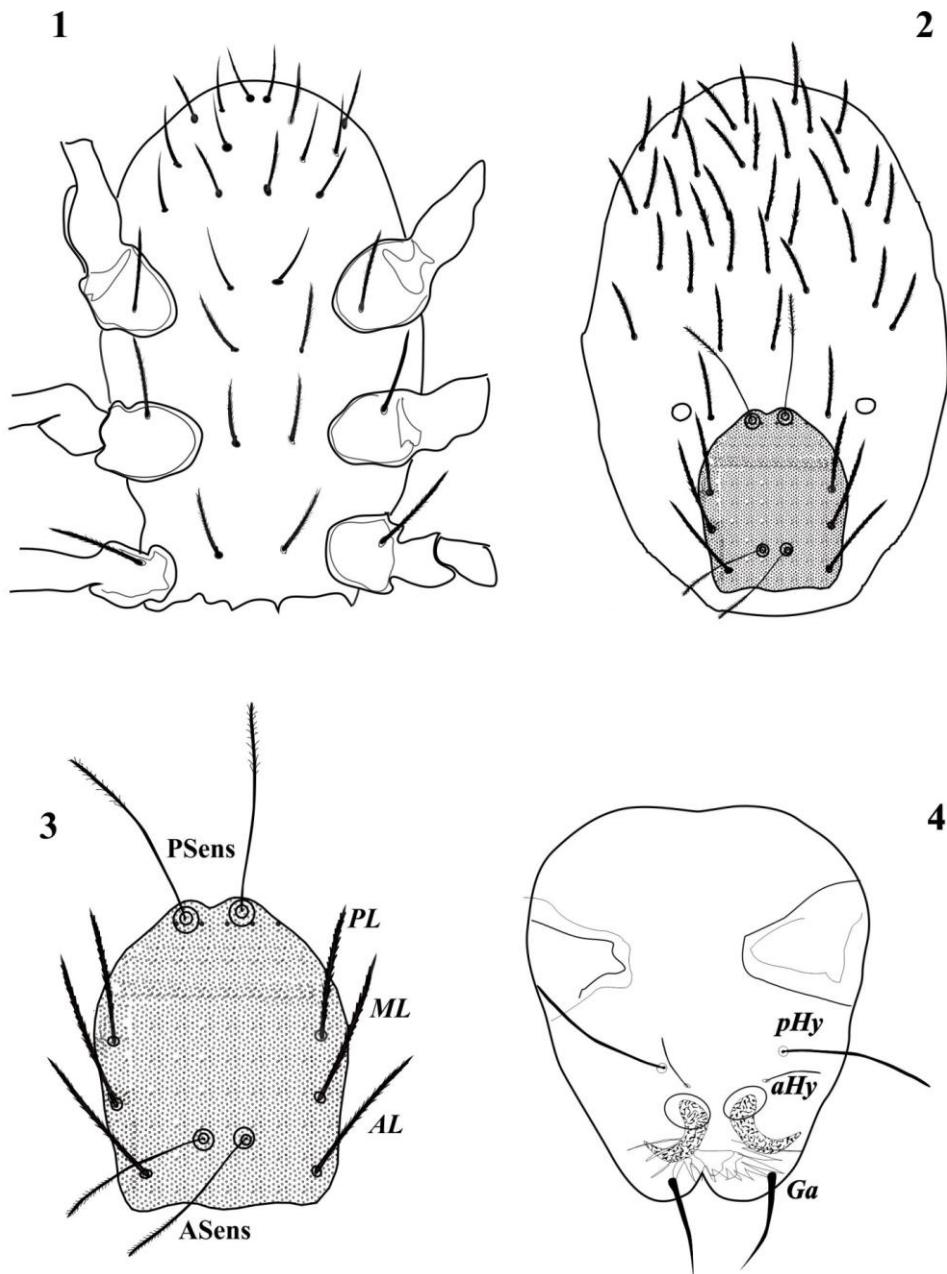

Dorsal and ventral surface of legs punctate.

Leg lengths: leg I 619-658, leg II 596-609, leg III 704-748. Ip = 1932-2013.

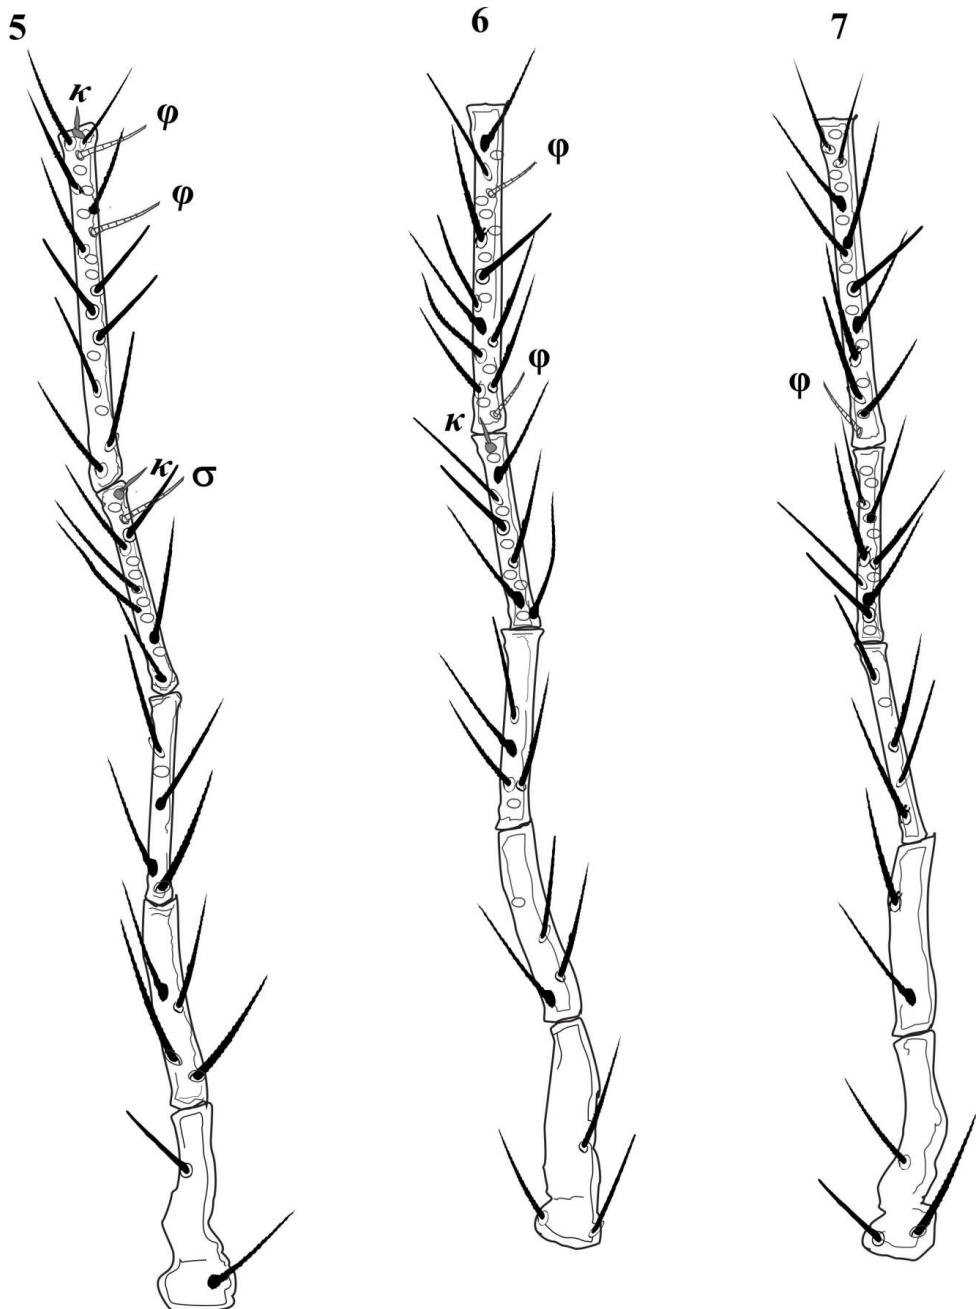

Table 1: Metric data of *Charletonia bucephalia* (Beron, 1975) larvae collected from Montenegro.

FIGURES 1–4. *Charletonia bucephalia* (Beron, 1975) (Larva). 1, ventral view of idiosoma; 2, dorsal view of idiosoma; 3, scutum; 4, subcapitulum.

FIGURES 5–7. *Charletonia bucephalia* (Beron, 1975) (Larva). 5, coxa-tibia I; 6, coxa-tibia II; 7, coxa-tibia III;

FIGURES 8–12. *Charletonia bucephalia* (Beron, 1975) (Larva). 8, tarsus I; 9, tarsus II; 10, tarsus III; 11, palp dorsal view; 12, palp ventral view.

CONCLUSIONS

Charletonia bucephalia is redescribed here and corrected characters are as follow (in the original manuscript this part of description is not given): One eye on each side of idiosoma and 21 µm in diameter; TaI 1□, 2□, 26B; TalII 1□, 1□, 27B; TalIII 1□, 27B. Gnathosoma with hypostomalae aHy, pHy and galaelae, both nude; Ga<pHy. Palptarsus with 6 setae, 1 very long seta and 5 distinctly shorter setae, (with eupathidium and solenidion), all nude. Corrected characters: TiI 1□, 2□, 18B; TiII 2□, 18B; posterior to coxae III 16 slightly barbed setae (fV).

This species belongs to the species group of *Charletonia* with two setae between coxae II-III. This group includes 16 species: *C. berlesiana* Paoli, 1937 from Italy; *C. bucephalia* Beron, 1975 from Bulgaria, Greece and Croatia; *C. edytiae* Haitlinger, 1987 from Madagascar; *C. blascoi* Southcott, 1993 from Spain; *C. saboori* Iravanlou, Kamali and Talebi, 2002; *C. nazaleae* Iravanlou, Kamali and Talebi, 2002; *C. damavandica* Iravanlou, Kamali and Talebi, 2002; *C. behbahanensis* Haitlinger and Saboori, 2008 and *C. talebii*, Ali Sedghi et al. 2010 all from Iran; *C. dalegori* Haitlinger, 2003 from Greece (Rhodes) and Croatia; *C. glifadaensis* Haitlinger, 2003; *C. kaliksti* Haitlinger, 2003; *C. kalithensis* Haitlinger, 2006; *C. samosensis* Haitlinger, 2006 all from Greece (Rhodes, Samos); *C. austensis* Haitlinger, 2007 and *C. cuglierensis* Haitlinger, 2007 both from Sardinia.

ACKNOWLEDGEMENTS

Authors are very grateful to Professor R. Haitlinger on his useful counseling.

**REDESKRIPCIJA I NOVI MORFOLOŠKI PODACI O LARVAMA
Charletonia bucephalia (ACARI: ERYTHRAEIDAE) JEDINKI
SAKUPLJENIH U CRNOJ GORI**

SAŽETAK

Rad se odnosi na redeskrifticiju i nove morfološke podatke larvi vrste *Charletonia bucephalia* Beron, 1975. U radu su prezentovane i metričke mjere vezane za larve vrste *Charletonia bucephalia*, koje su sakupljene kao ektoparaziti na *Euchorthippus declivus* (Brisout, 1848) (Orthoptera: Arcidae) sa Paštrovske Gore u Crnoj Gori.

Ključne riječi: *Charletonia bucephalia*, *Euchorthippus declivus*, larva, redeskrifticija, morfološki podaci.
